TDX Redundant Power Supply Unit

The TDX Redundant power supply provides you with a high degree of power assurance in connection with your TDX headend system.

Brand: Triax

The redundant power supply uses two identical power supply units mounted in a mechanical frame. Only one of the two units will be active at all times supplying power. If one power supply unit breaks down the other unit instantly takes over and thereby prevents an interruption of the supply of power.

Ethernet WiFi Endpoint with PoE (EPE)

The Ethernet WiFi Endpoint (EPE) with dual band concurrent Wi-Fi, is used in conjunction with the Triax Ethernet over Coax Controller (EoC) and is intended to provide Wi-Fi access in rooms without Coax cables. This is often the case for rooms such as conference rooms, corridors, lobbies, bars, etc.

The PoE Access Point is powered via Ethernet (PoE) to make the installation easy and independent of a power outlet. This will require the installation of a PoE+ compliant Ethernet switch connected to the EoC Controller.

The PoE Access Point also has a PoE output (passthrough) to supply power to other PoE devices. This could be a 2nd PoE Access Point, an IP phone, a Camera or other devices in the same room.

If the PoE output is not used, the AP can be switched to power save mode to accept a reduced PoE input power.

Main features

2,4 GHz Wi-Fi - 802.11b/g/n MIMO

5 GHz Wi-Fi - 802.11ac MU-MIMO
